Fig (Ficus religiosa) / *Ficus religiosa*, tree fig
The fig is a member of the fig family (Moraceae). It is a large, evergreen tree with a thick, gnarled trunk and dense, small, elongated green leaves. The fruit is a small, round, greenish-yellow berry that hangs from the branches. The fig is a common tree in many parts of the world, particularly in tropical and subtropical regions. It is often used as a source of wood for construction and as a source of food for many animals.

Ganoderma lucidum
This is a species of fungus that grows on the trunks and branches of trees. It is a large, cup-shaped fungus with a bright orange color. It is often found growing on the trunks of fig trees. The fungus is a member of the Ganoderma genus, which is known for its ability to grow on a wide variety of tree species.
