**A better world starting from
YOUR
neighborhood**

Psychias Philip A'3

This model is based on my subject, “A Better World”, and presents the way everybody would like their neighborhood to be. It’s a nice eco-neighborhood with 50% electricity (from 12V) and some small trees in a nice park.

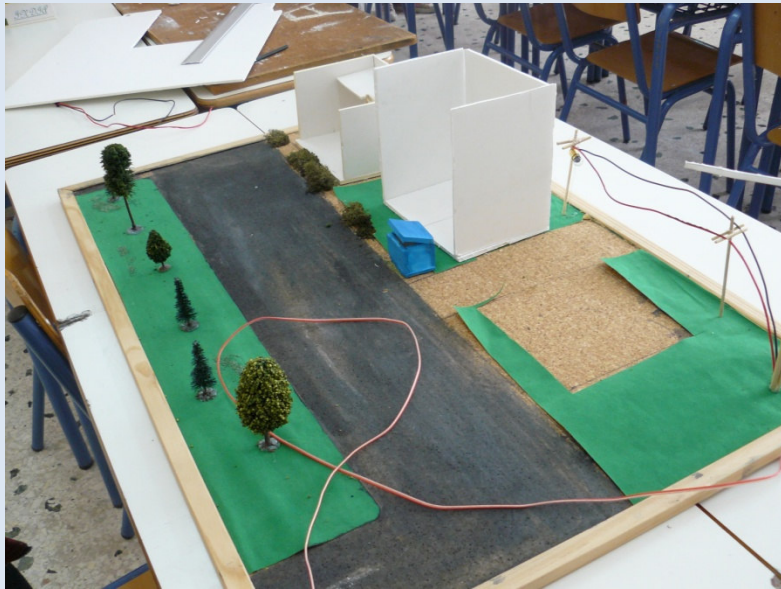

I want to show how we can save electricity, which is why I've sent three photos of the model - a photo of it in the morning without any lights, just so that you can see how it is naturally, a photo with 100% electricity taken in the dark* and a photo with 50% electricity also taken in the dark*.

With these photos I would like to prove that we can live with dimmer lights in our household most of the time. For example, we don't need powerful lights for dining, entertaining or relaxing. The more we become aware of this, the more we save energy.

The model also presents some families as we would see them in their homes, for example, having a nice dinner or entertaining themselves. Here I want to show how we imagine our families; peaceful, with love and respect for each other.

I used a lot rafi.ki to exchange ideas about saving energy with students of other countries.
