

A.

Ladies and gentlemen today, I want to talk about a very big problem that has been troubling the world in recent years: the climate Crisis.

Climate crisis is the sudden change of Climate all around the world and it is caused by non other than us humans. Climate crisis has brought along a lot of problems to all humanity such as extreme weather cases daily, floods, fires and many more.

But how can we fight back and stop this terrible phenomenon from enlarging? That's what I wanted to talk about today. I believe we should all start by bettering non other but ourselves, for example, we can start building good habits live recycling, consuming less energy and water and reduce carbon footprint by riding our cars or motorcycles only when necessary. Furthermore, we can start taking part in climate activism and teachers, children, friends, o the people close to us to respect mother nature.

To sum up, climate change is a horrible phenomenon that will probably be troubling the world for many years to come, but if we all act and begin doing some of the things mentioned above, we can stop this horrible plague from destroying our lives and our ecosystem.

B.

Nowadays, the climate crisis is a serious problem for humanity and it's important to find some solutions if we want a better future for the next generations.

First and foremost, we must save energy at home with a change to our home source of energy. Moreover, we can choose better ways of transportation, like an electric bike or a car. Furthermore, we must reuse, repair and, most importantly, recycle. Last but not least, we shouldn't buy things that will be a white elephant and we will probably produce a lot of rubbish.

In conclusion, we must take all the above mentioned measures if we wish to build a better future for the next generation.

C.

Dear teachers and fellow students,

With all the respect and knowledge I have, I am about to express some feelings about the worldwide and well known problem of the climate crisis. This problem is caused by us, our civilisation, therefore, we are the best responsible to change the situation.

To begin with, a marvellous idea would be to start using public transport more often, instead of using our cars, bikes etc. By that action we're not wasting these unnecessary gas and we lower the pollution levels.

Apart from that, to solve this major problem we should rethink our actions. Basically, we need to stop using toxic supplements, like hairspray etc. that cause permanent problems to the planet.

In conclusion, we need to be aware of our actions, know what we are doing and most importantly, avoid actions with permanent consequences.

Thank you for your attention

D.

Ladies and gentlemen

We can't ignore the climate crisis anymore. Our time is very limited and everyone's concern is needed. But, our options are not limited. We have a plethora of ways to tackle this problem.

First of all, the number one way is to lower big corporations' carbon emissions. Unfortunately, the governments have allowed big corporations not to limit their emissions and that has been proven to be a fatal mistake. It's time for governments and officials to restrain the amount of carbon footprint from large corporations with huge profits out of the environment's exploitation.

Although corporations have to take on the biggest blame, we, the everyday individuals, have the responsibility to limit our carbon emissions. We need to start recycling, buy eco-friendly products, limit our overall consumption, take action in peaceful protests about the climate crisis and try to raise awareness on our own friends and family.

In conclusion, the combination of both actions will lower carbon emission by an important percentage rendering the climate crisis rather solvable. The key is for us not to relax but try in every way to solve it.

Thank you for your attention.

E.

Dear Prime Minister,

I'm writing this letter to suggest ideas to fight the climate crisis. This is a serious problem that concerns all of our country's citizens, so getting over it will be a remarkable achievement.

First of all, a better recycling system must be developed. This means, encouraging all the people to recycle and help the environment. By doing this, the climate crisis will be significantly reduced.

Moreover, gas-using cars should be replaced by electric ones. This will prevent the pollution of the environment, so everyone's health, as well as the Earth's will be safeguarded.

In conclusion, fighting the climate crisis can be a serious challenge. But with dedication and hard work it can be overcome. Recycling and using electric cars are some really helpful actions and that's why they are suggested for a better environment, for a better life!

Yours faithfully

A senior class student

F.

Dear Prime Minister,

As representatives of the second High school of Aigio, we are sending you this letter in order to propose ways to combat the climate crisis.

The collaboration of the international community is considered a necessary condition. In particular, it is vital to provide eco-friendly technological equipment to weaker countries, giving a substantial solution to the protection of the ecosystem. Furthermore, the international political leadership has to demand the utilization of renewable energy sources, like sun, wind and water in order to reduce the use of meager natural sources by industries.

Hope you take our letter into consideration so we can live in an eco-friendly world.

Yours sincerely,
Senior Class Students

G.

Dear President, distinguished members of the board and fellow delegates,

Our world is in danger and this is a recognized fact. I am here today to make some suggestions in order to fight, having as a cause the saving of our planet.

Firstly, we must not forget that it is our duty to keep our "trash " away from the earth. We have to recycle whatever could possibly be recycled, such as plastic and glass. By doing so, we can keep anything toxic away from the earth. Lastly, as you can see, we use mobile devices everyday. It must be stated that by reducing the use of technological devices and instead using solar energy , we can preserve a healthy environment for us and our beloved ones.

I hope my speech moved you emotionally as much as it did to me and so I would like to believe you act in favour of what I just mentioned. Thank you for your attention.

H.

Dear President, distinguished members of the board and fellow delegates,

It is my great pleasure to stand before you and share my suggestions in fighting a pressing matter in our everyday life. Climate change. I am sure you are familiar with the term as it has been a way over talked topic.

There is no doubt that our planet is slowly dying and we are to blame. So, I am standing here hoping to make suggestions that will inspire you to make choices with our planet's best interest in mind. First and foremost, one of the highest contributors in the environmental pollution is, of course, the insane amounts of littering we humans cause. It would be of great importance to enforce strict policies on littering in order for it to start to decrease. Furthermore, we should all start to make our everyday lives a little greener. Meaning, we should start recycling and volunteering in city wide cleanings. Also, we should limit car transportations if they are not essential in order to reduce the large amounts of carbon emissions happening daily. Lastly, I would like to advise everyone to start making small changes in their everyday life and adopting a greener lifestyle in order to help heal our precious planet.

The earth does not need us in order to live, we, on the other hand, need Her.

Thank you so much for your attention.

I.

Dear fellow students,

I would like to inform you about the most serious and highly dangerous problem of our century, climate change. We should all work together in order to bring an end to this arbitrary catastrophe of our environment.

To start with, there are some simple things we could all do in order to prevent environmental pollution. Choosing to move by bicycle or walk to our job or school every morning is something most of us could and should do. In addition, buying products in recyclable packaging instead of those in plastics and recycling them is a meaningful thing that everyone could do.

In conclusion, climate change is a problem that could have very negative effects in our everyday life and everyone should face the problem now.

J.

Dear Citizens,

As a fellow citizen as well, it is my duty to provide the best I can to this city, to this world. It's not really easy nowadays, though. Climate crisis is at its peak and we don't know how to react to it, making it way worse.

Taking care of the earth is like taking care of ourselves. We need to stop being so immature and start thinking logically. We ought to clean the mess we are creating, for example at big events like concerts, we can clean behind us, clean the beaches of our town, start recycling. Those are just simple ways to stand up and fight climate change.

But can we start just like this? This way of living should start from home. Something more effective is to educate children in schools. They will be ready to face up to the cruelty of the world and protect both them and the earth. They will stop using resources that hurt nature, reduce the fossil fuels, like gas and petrol, plant trees etc.

I know, it's rather late to completely fix the problem. But we sure can help to at least reduce it. We are citizens, most of us young ones, too. We are the future of this world, the fate of our ancestors. We have to provide the best to our successors. So it's time to act!

Thank you for your attention.

K.

Dear classmates,

As we all know, we are living through an international ecological crisis. The temperatures are rising and climate change is impacting our health. But how can we prevent this phenomenon?

First of all, the government could invest in renewable resources to produce energy and reduce carbon emissions. In addition, with electric cars and public transport, the cities would become much safer for people with health problems.

Moreover, tightening the environmental laws and increasing the fines when abusing the environment would definitely reduce the climate crisis.

We all have to participate in this movement, though. Spreading information and organising events can help more people learn about these problems that affect all of us. But it's nearly impossible to completely solve this already established climate change. It's worth the effort, though!

L.

Dear friends,

You all know about the environmental problems facing humanity. It is good that we all try to help the situation. First, garbage must be reduced and recycling implemented in every region of our country. It is even better if the Municipality keeps the parks green and plants everywhere. It is also necessary to use reusable items so that new ones are not constantly produced and factories do not consume energy.

I hope you consider my suggestions.

Thank you for your attention.

M.

Dear fellow students,

First, we should invest more in solar, wind, and hydroelectric power. They're clean and sustainable. We can do this by using public transportation, carpooling, or even biking and walking, when possible. Furthermore, trees absorb carbon dioxide and release oxygen. Also, we can recycle, compost and reduce single-use

plastics. Small changes like these can make a big difference. Lastly, we need to educate others about climate change and its impact. Social media campaigns and community events can help spread the word.

Thank you for your attention.

N.

Dear community,

Our society has to take responsibility for the climate crisis. The age of progress about our nature has to take place. With this action, we can support our earth and raise awareness about climate change.

First of all, we have to save energy at home since most of our electricity is powered by oil resources. In addition, we can throw away less food and eat more fruits and vegetables and products of our own region. Plus, we should avoid products that use a lot of packaging to be delivered. Don't forget to drive less. Cycling is the best means, helping the Earth and our health, at the same time. Lastly, we suggest all of us recycle more so we can stand by nature.

It's high time we acted now before it's too late.

Thanks for your attention.
