

Bioclimatic school buildings for all

Through an Erasmus+ program, we realized that Aigio and Maçanet have prefabricated modules for school.

The first containers set in 2009 in Maçanet de la Selva, Catalonia

2nd Highschool of Aigio, Greece, nowadays

The Greek high-school is in containers, over the last 30 years, after a disastrous earthquake. “Its location in a covered current raises fears of flooding”, says the Greek school principal. According to the Greek mayor, “the municipality lacks proper space to build a permanent one” whereas the Catalanian Prefecture plans to go ahead with it but “there is nothing more than just a ‘hole’” exclaim the Spanish students.

Maçanet de la Selva HighSchool today, till new building is built

2nd General HighSchool of Aigio area for PE, located in a covered water current.

“Bringing blankets in the winter and suffocating in the summer” both schools say, “poses serious obstructions to learning”.
