
Marie Curie was a famous scientist. She was born in Poland in 1867. Marie was very smart and loved to study. She moved to France to go to university because women in Poland could not study at that time.

Marie Curie is known for discovering two new elements: **polonium** and **radium**. She also studied **radioactivity**, a new type of energy. For her hard work, Marie Curie won **two Nobel Prizes**—one in physics and one in chemistry. She was the first woman to win a Nobel Prize.

Marie Curie helped many people with her research. Sadly, she became sick because of her work with dangerous materials. She died in 1934, but her discoveries changed science forever.

Albert Einstein was a famous scientist. He was born in Germany in 1879. Einstein is known for his work on physics and math. He created the famous formula: $E = mc^2$, which explains energy and mass.

Einstein was a very smart student, but he had trouble speaking when he was young. He loved to think about how things worked, like light and space. In 1921, he won the **Nobel Prize** for his discoveries.

Later, he moved to the United States because of World War II. He continued his work there and helped develop new ideas in science. Albert Einstein died in 1955, but his ideas still help scientists today.
