Kindergarten of Agios Konstantinos, Trikala-Greece 11 (5,1%)

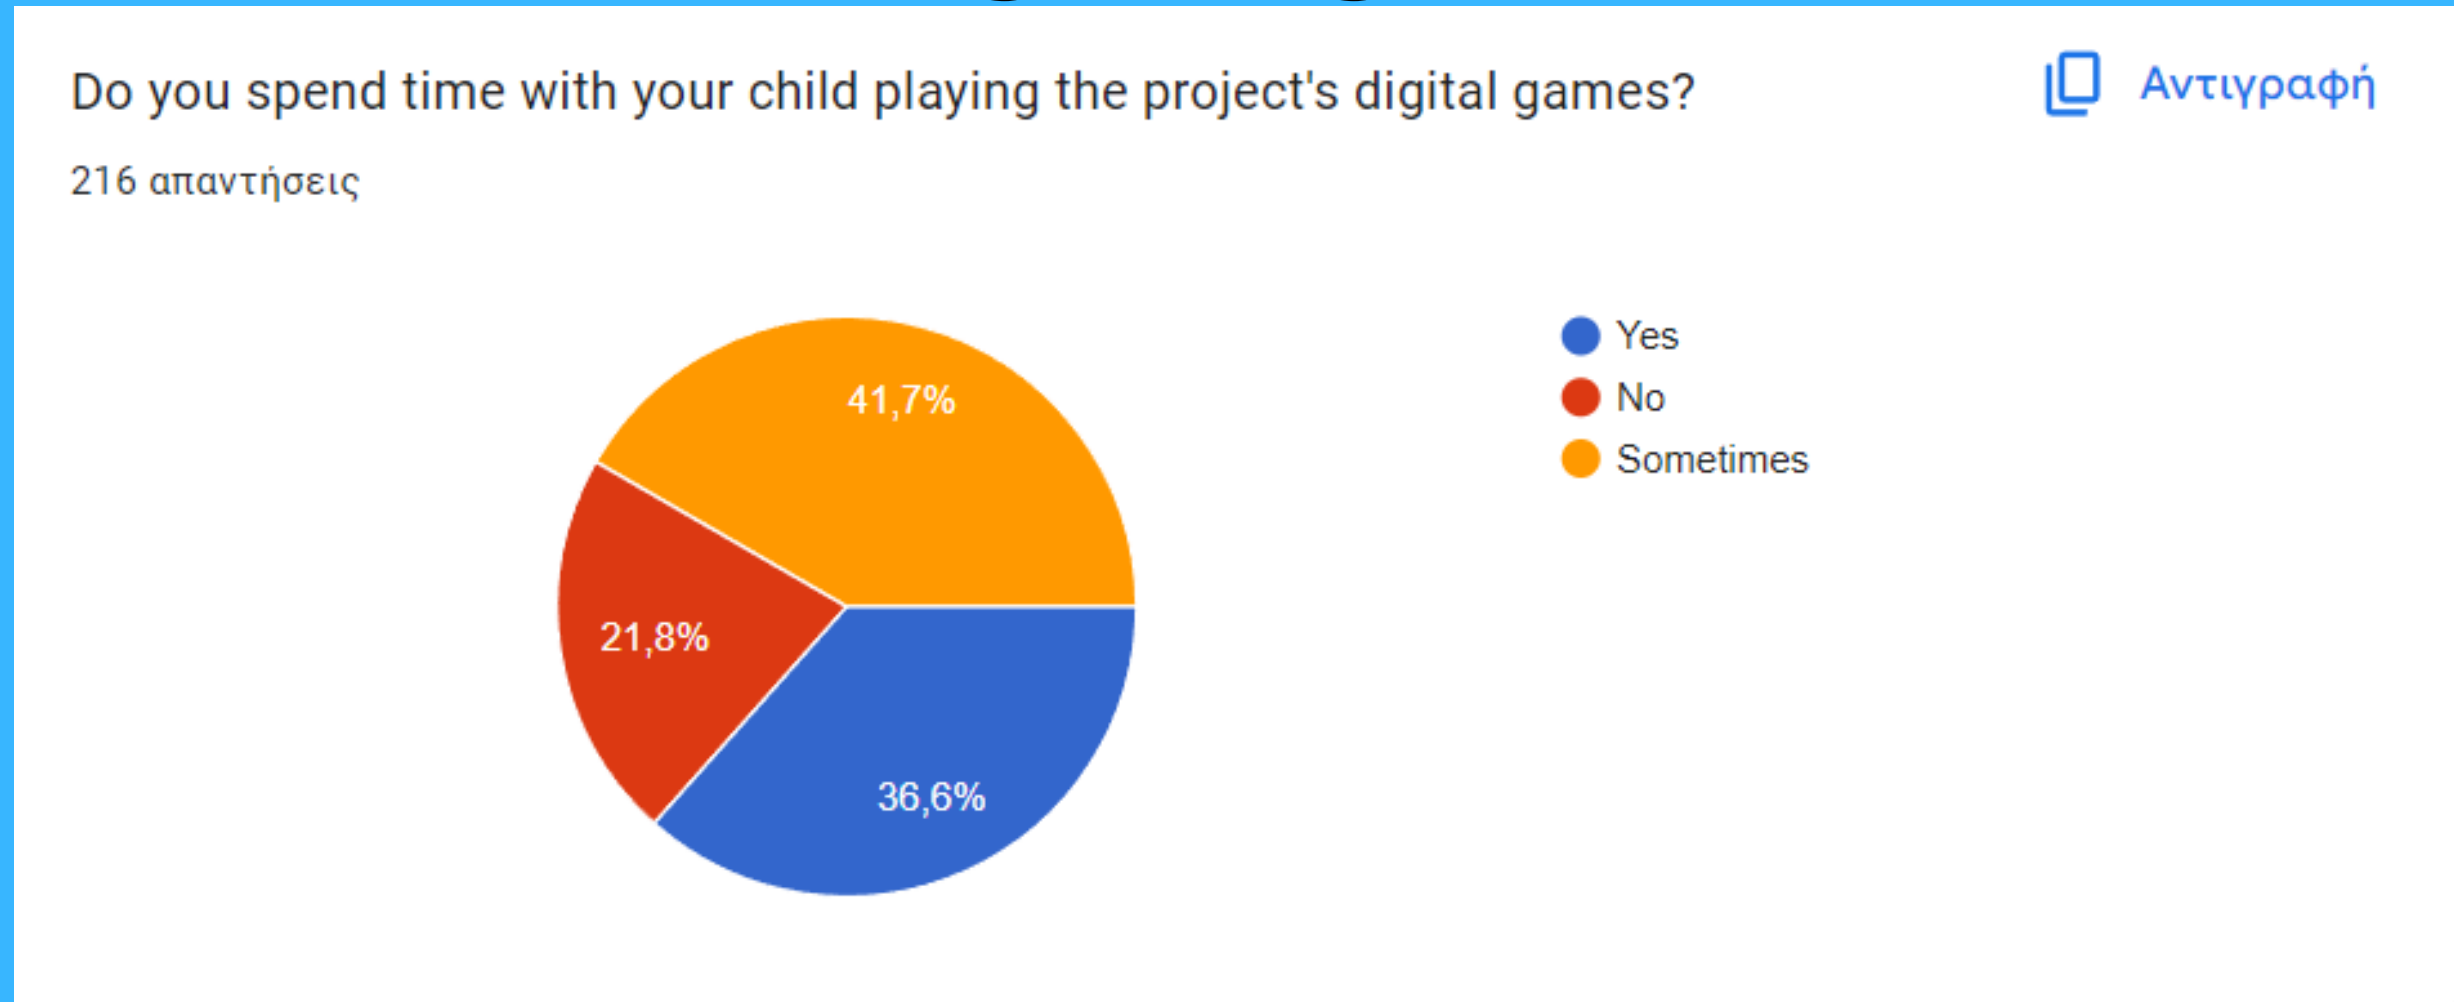

Kübra Efe Anaokulu-Türkiye 11 (5,1%)

How satisfied is your child with the progress of the project so far?

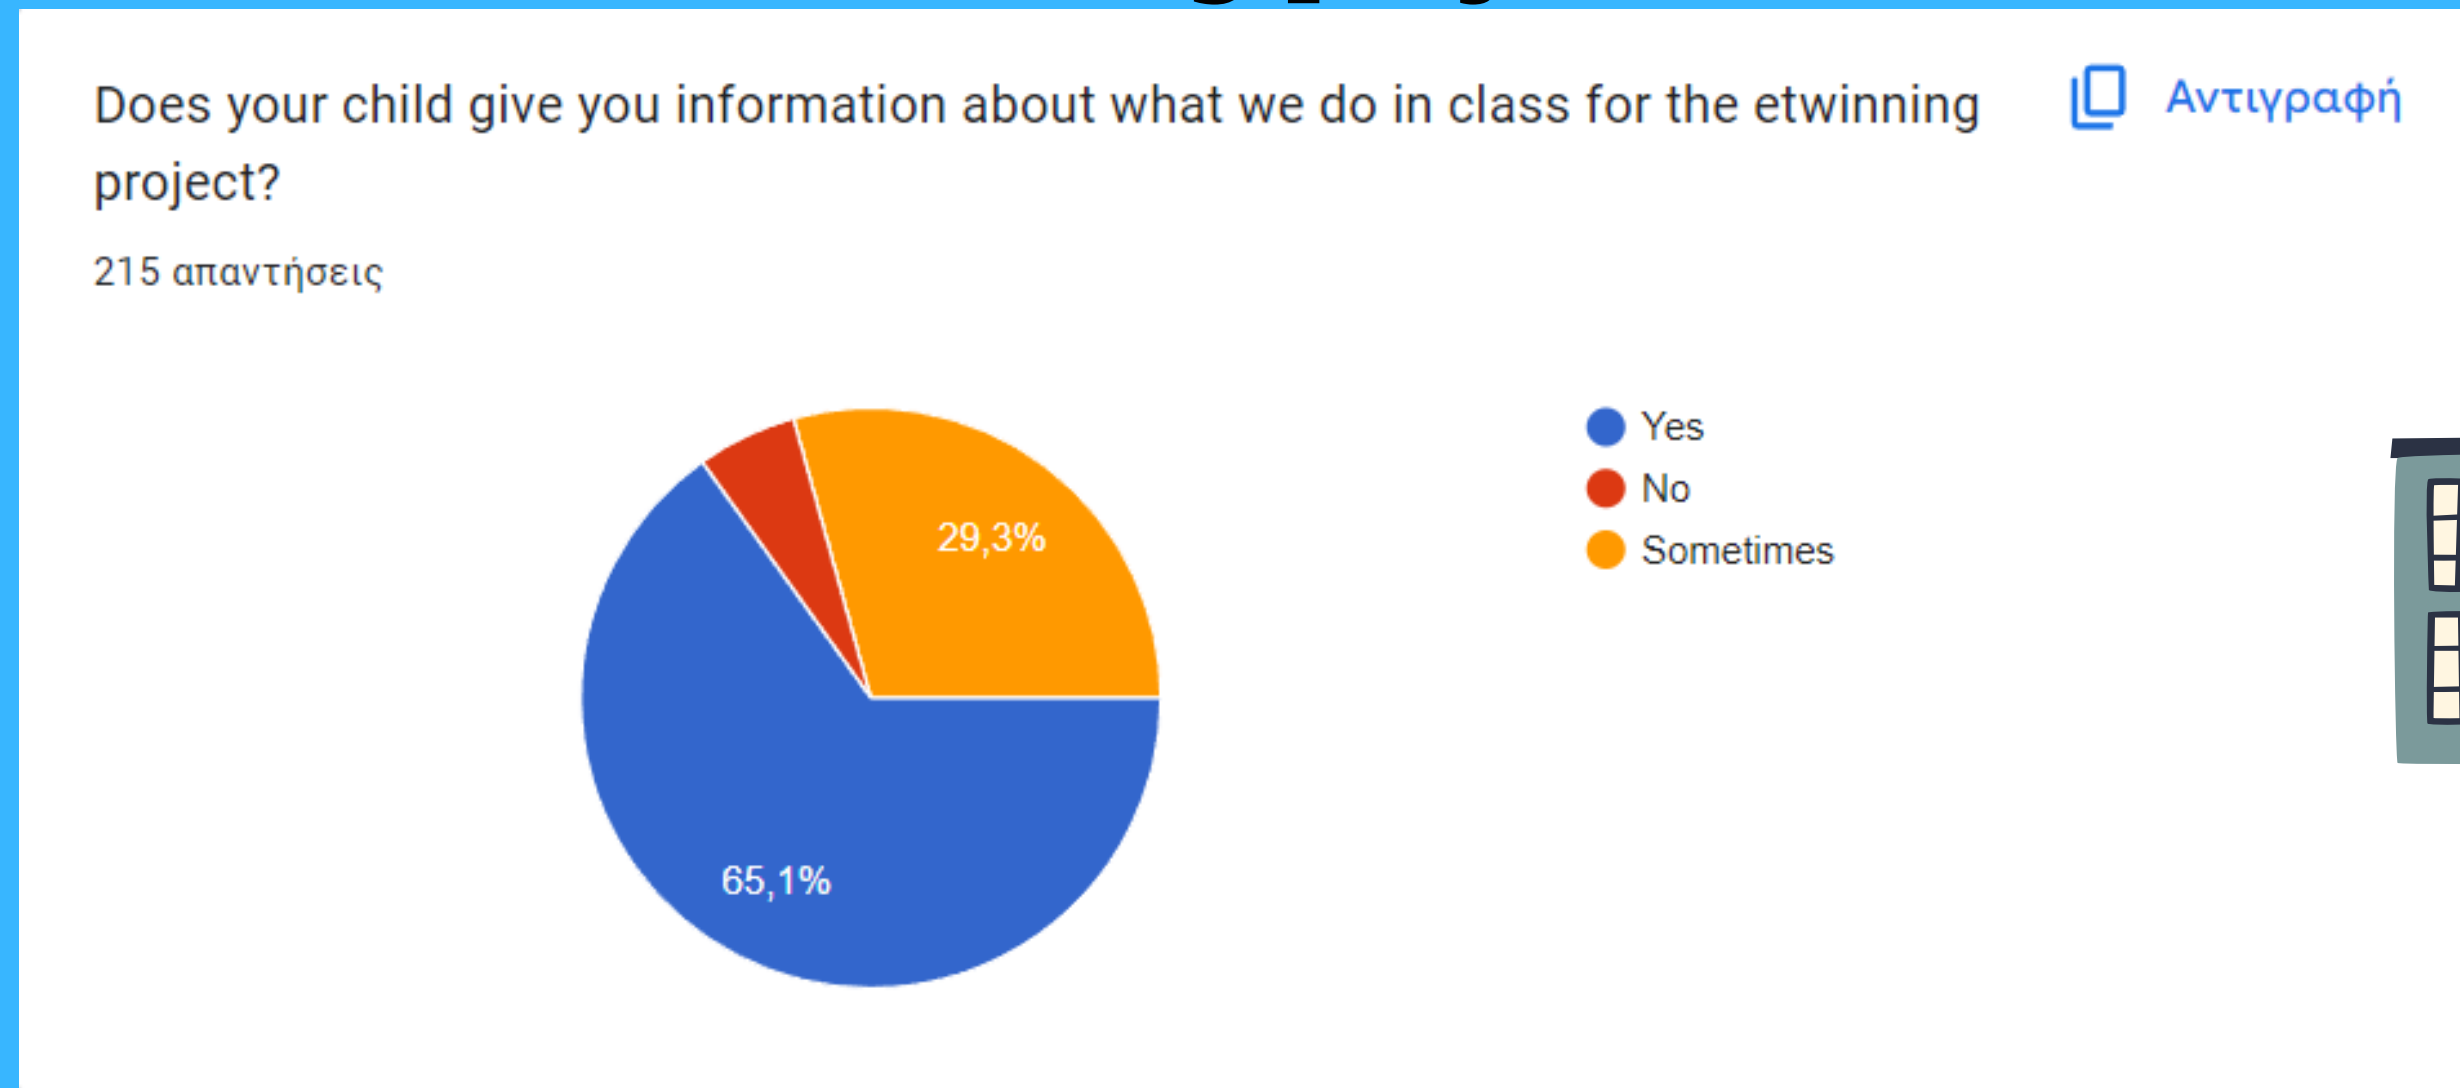

70.4% of the participants answered that their child is very satisfied with the specific project, 20.8% that they are satisfied and only a very small percentage replied that they are very little satisfied. This fact suggests that the theme of the work interests and excites children immensely.

Do you spend time with your child playing the project's digital games?

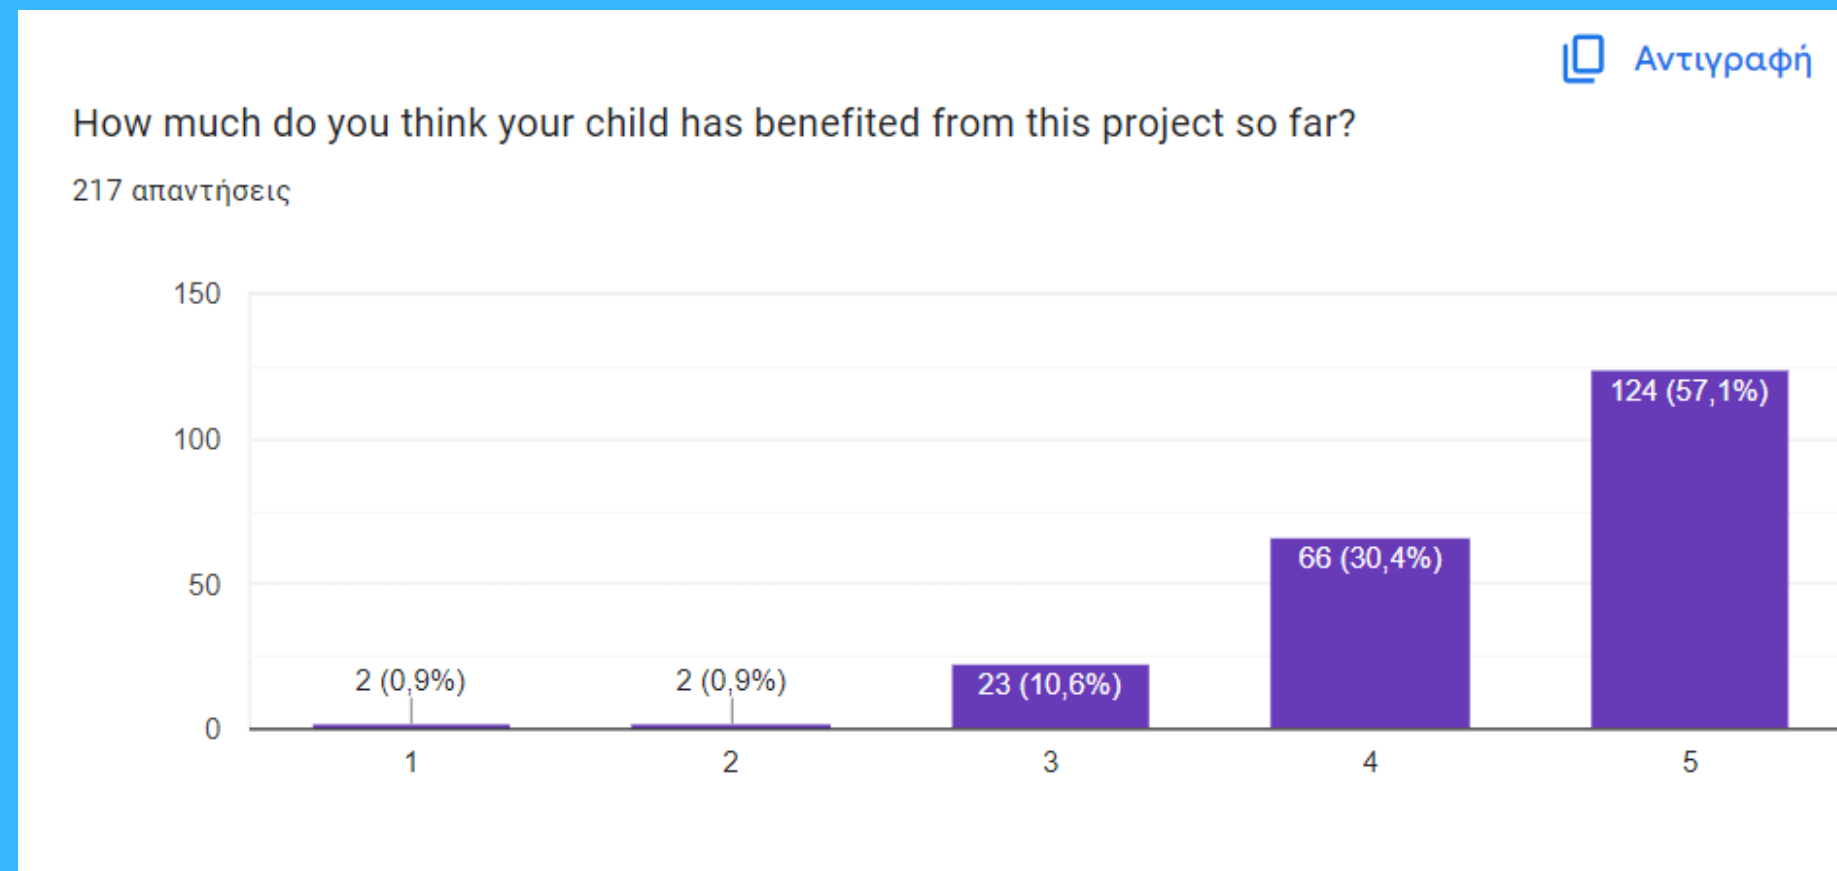

A percentage of 36.6% of the parents who answered the question spend time with their children playing the digital games of the project and a percentage of 41.7% do so sometimes. The remaining parents (21.8%) answered negatively.

Does your child give you information about what we do in class for the etwinning project?

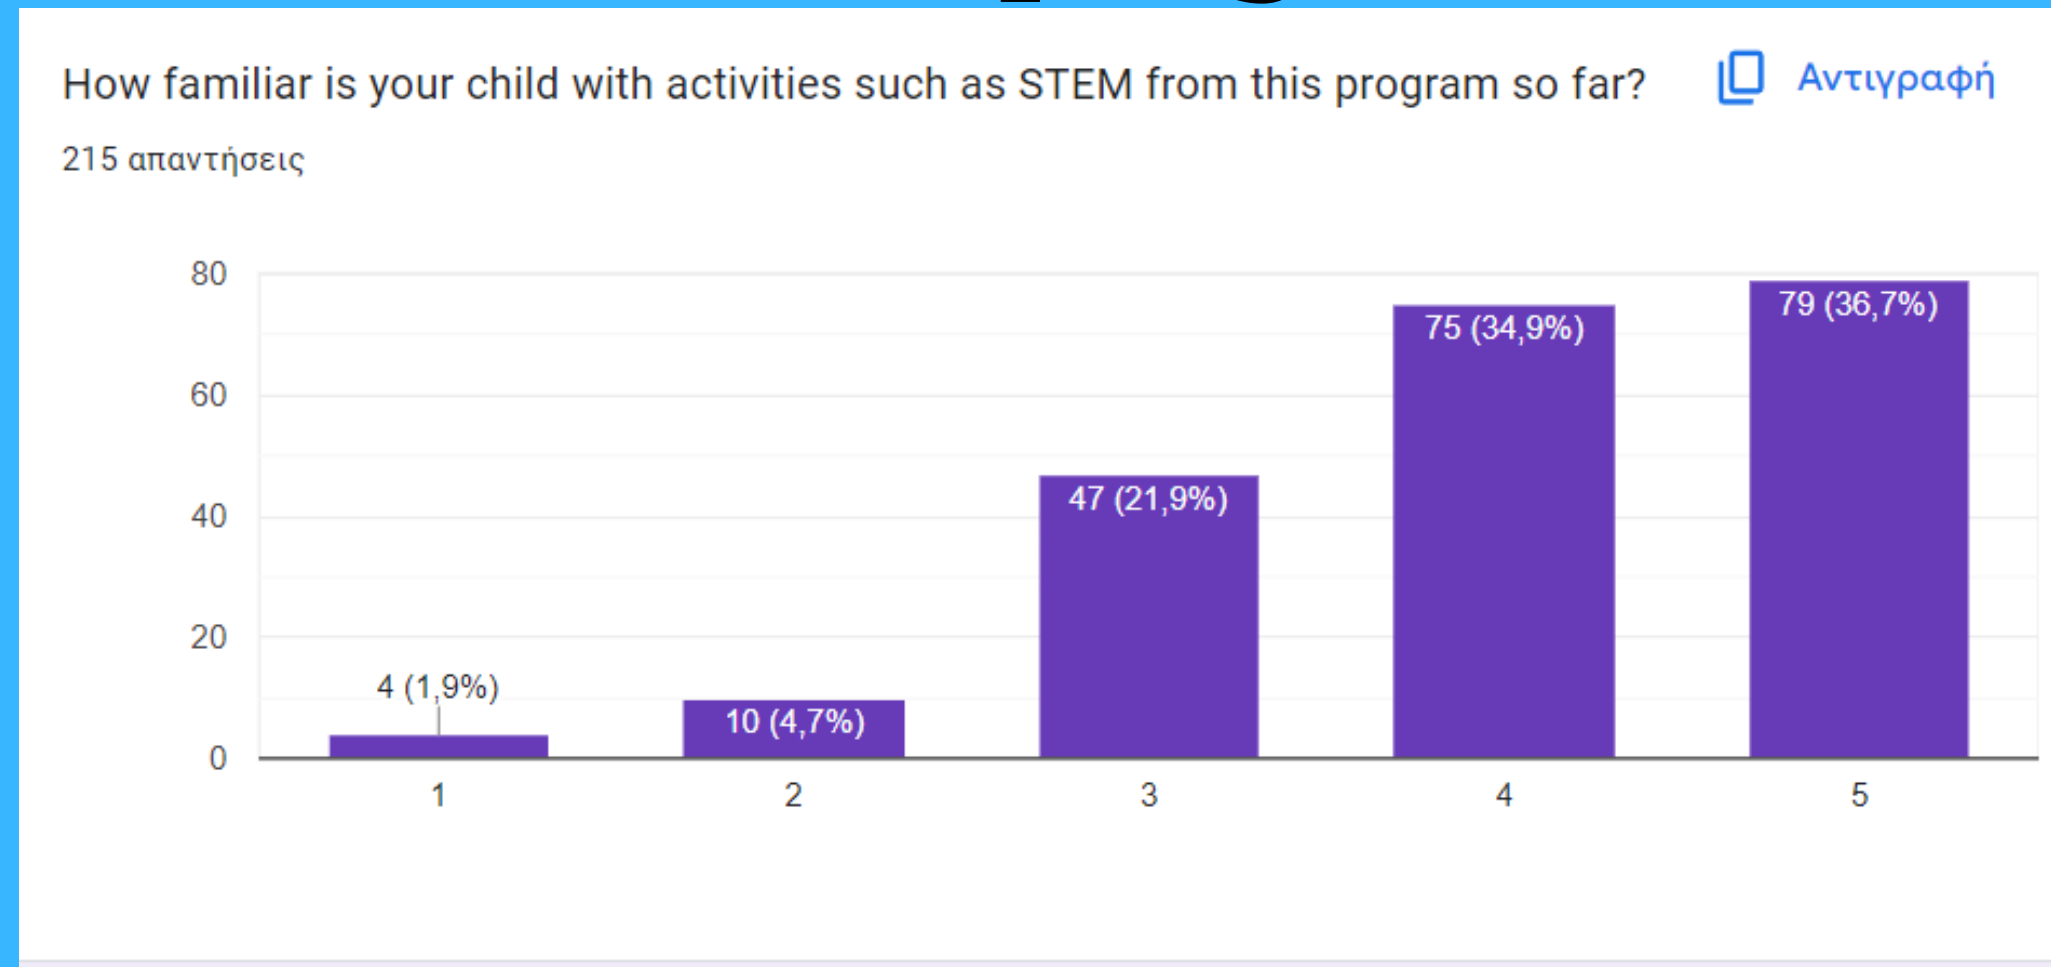

The results show that children inform their parents about classroom activities (rate 65.1% often and rate 29.3% sometimes). A very small percentage (about 5.6%) answered that they do not have any information from their children.

How much do you think your child has benefited from this project so far?

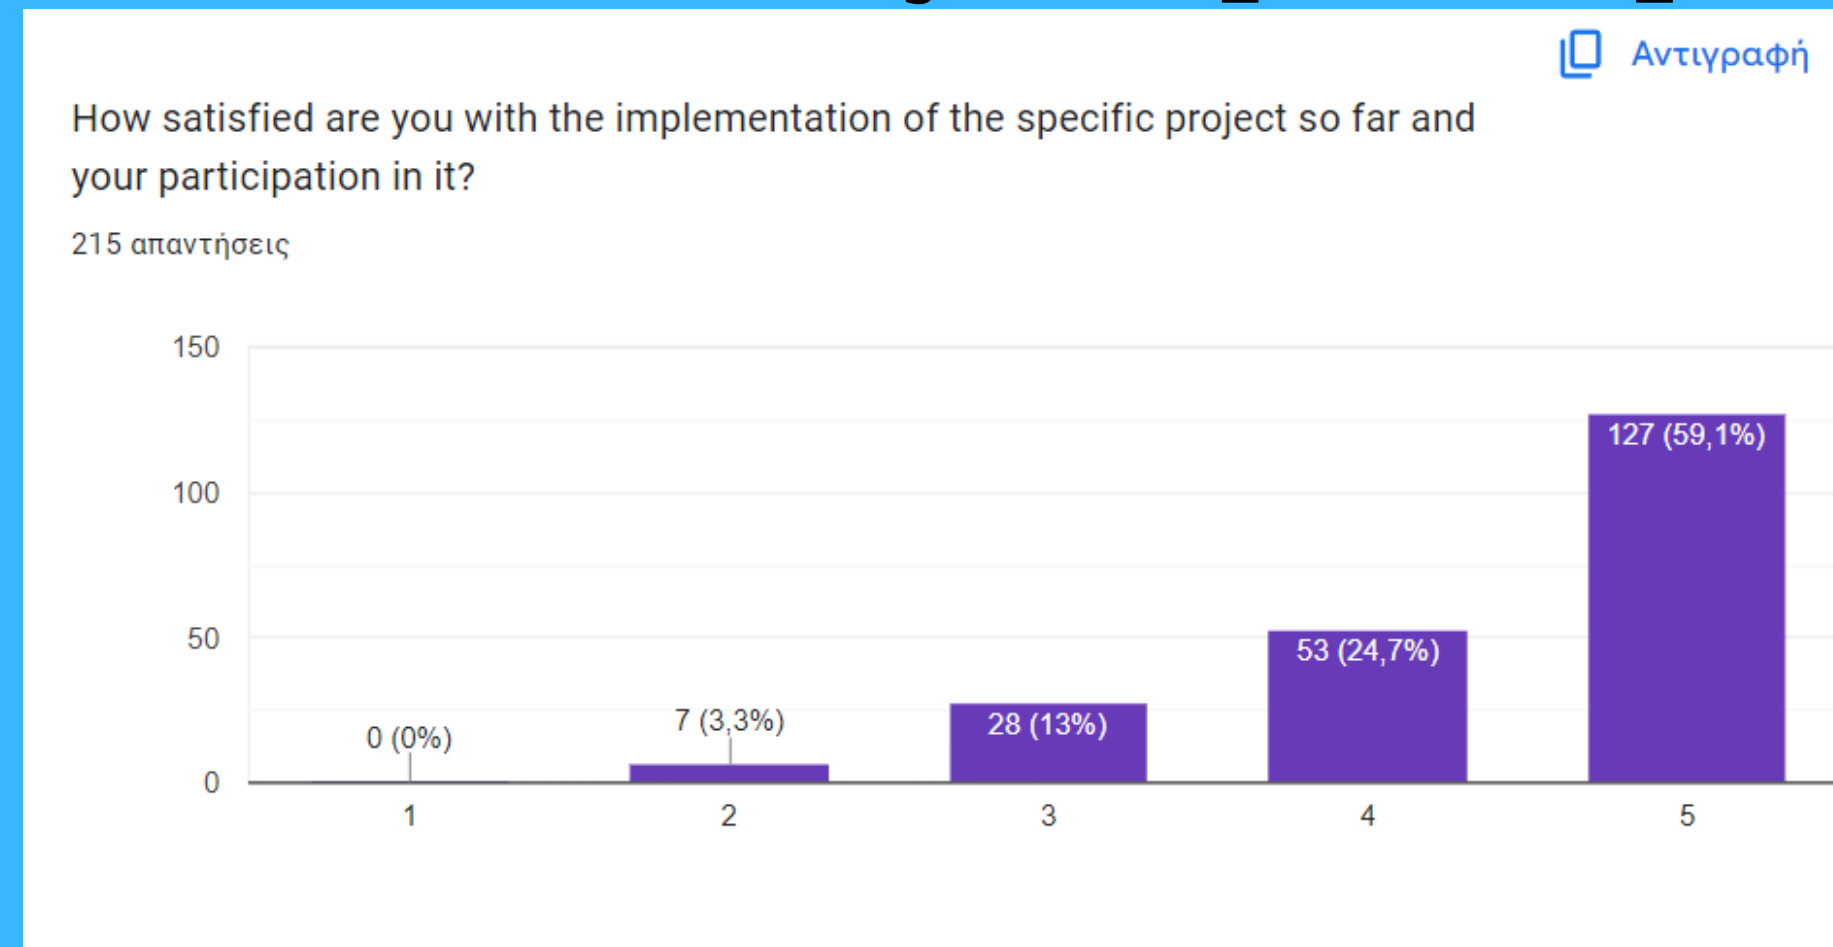

The majority of participants (approximately 87%) consider their child to have benefited in many areas from the project. Only a very small percentage does not express this opinion.

How familiar is your child with activities such as STEM from this program so far

A fairly large percentage of participants consider that their child is very or fairly familiar with STEM activities. But there is also a percentage that considers their child's familiarity with STEM activities to be below average. This suggests that STEM activities are taking place to a large extent in schools and that this should be continued and intensified.

How satisfied are you with the implementation of the specific project so far and your participation in it?

A fairly large percentage of the participants (approximately 83%) are very or very satisfied with the course of the project and with their participation in it. A percentage of 13% is quite satisfied and a very small percentage is not at all. These answers indicate that the progress of the project is positive and that perhaps some more steps should be taken with the aim of involving the rest of the participants.

From the participants' responses, it appears that the children are very satisfied with the project, they inform their parents about the activities, they have fun and spend time together playing digital games. The parents are also mostly satisfied with the course of the project and with their participation in it.

THANK YOU
~~~~~  
VERY MUCH!
