Entrepreneurship Students deal with the jobs They choose their future jobs

IPERMAHIA APR 27, 2023 06:45PM UTC

## JOBS IN THE FUTURE (Spain)

-JOBS IN THE FUTURE-

Hi everyone, we think that these are the jobs that will be important in the future. These jobs are doctors, AI specialist, cyber lawyer and virtual reality application developer.

Doctors.

The medicine of the future will not focus only on curing, but also on prevention: something that can save lives, anticipating diseases, for example, and that allows cost optimization. Technology as a tool can support this early detection and treatment.

Doctors have an average gross annual salary that varies depending on the autonomous community in which they practice their profession. On average, a doctor in Spain in public health is 54,200 euros gross, which means a net monthly salary of 2,940 euros. The most important requirement to practice as a doctor is to have completed a Bachelor of Medicine. In the case of Spain, these studies can be accessed after completing the Bachelor of Health Sciences.

AI specialist (30.000€-77.500€)

The productivity of artificial intelligence may boost our workplaces, which will benefit people by enabling them to do more work. As the future of AI replaces tedious or dangerous tasks, the human workforce is liberated to focus on tasks for which they are more equipped. This job is going to be very important in the future, because this job is consisting of repairing the AI and is important to understand the AI.

What do we have to study to be an AI specialist?

-A bachelor's degree in mathematics, data science, statistics, and computer science

cyber lawyer

The cyber lawyer is a lawyer that detects the problems that affect people or companies from cyberspace to act directly within the network itself, for example Scams, attacks and information theft. They defend the people and the companies from that.

The salary is between 30.000 and 55.000 € per year, so it's well paid work.

To be a cyber lawyer you have to study law and be a member of the Lawyer Association to be able to practice as such.

Virtual reality application developer

VR programmers write the code for cutting-edge game development. VR, in which a player puts on a headset or goggles and has the sensation of actually stepping into another world, offers a deeper sense of immersion than video games.

Virtual Reality (VR) app development is creating software applications that utilize VR technology to create immersive, three-dimensional digital environments for users to interact. VR apps typically require a VR headset or other specialized equipment, such as hand controllers or body tracking sensors.

The salary of \$58,000 is the 25th percentile. Salaries below this are outliers. \$113,500 is the 75th percentile.

Skills necessary for a virtual reality developer include:

1. Programming languages and hardware knowledge. A VR developer will work with both.
2. 3D modeling. A VR developer will likely need to work with a 3D system like 3DS Max and a 3D software development system like a game engine.
3. Video game development. ...
4. User experience.

### -Psychologist-

People in society seek support and use professional mental health services because they work hard and are stressed. Recent events such as economic troubles, pandemics, natural disasters, or environmental concerns have increased the demand for psychologists and mental health-related jobs. Psychologists have an important role for healthy behavior, preventing diseases, and improving patients' quality of life.

### -Drone Pilot-

Drones are becoming more helpful and popular by the day. They can revolutionize delivery services, offer medical supplies in a safe manner, and more. Over the next ten years, drones will continue to become a more widespread element of the modern world. Keeping that in mind, drone experts will be needed to manufacture these machines, maintain them, and, perhaps most important and fun of all, fly them :)
