

# News

***To all members and followers of the EAAE activities,***

With this publication the EAAE informs all members and followers of the activities of the European Association for Astronomy Education that will announce its two emblematic competitions: Catch a Star and Space Art on the scheduled dates.

Firstly, the call for the ***Catch a Star*** contest will be published on November 1, 2023 and the deadline for participants to send their works will end on March 31, 2024.

The ***Space Art*** contest will be called on January 2, 2024 and the deadline to submit works and participate will be March 31, 2024. The resolution of the contest will be announced on April 22.

There will be no significant changes in the rules and requirements to participate, as well as in the prizes awarded. In any case, we advise you that before participating you visit our website: <https://eaae-astronomy.org/> and read the new call to avoid misunderstandings.

In order for the projects to maintain their high success rate, we ask them to give maximum dissemination to the announcements of the two competitions among their contacts: professional networks, personal contacts, teachers' associations, schools, publications in educational magazines in their respective countries and by any other means possible at your disposal.

And, please feel free to publicize the web pages of the two programs:

- For Catch a Star: <https://eaae-astronomy.org/projects/catch-a-star>
- For Space Art: <https://eaae-astronomy.org/projects/space-art>

Once the competitions begin, you will be able to find all the information on how to participate on the respective websites, although, as mentioned above, the rules and requirements will not vary much from those of the previous call.

We thank you in advance for your attention and collaboration with the European Association for Astronomy Education and if you have any questions or comments, please do not hesitate to contact us. Thank you very much.
